

# HAVE YOU OUTGROWN QUICKBOOKS?

You've upgraded from using your washer and dryer as a desk in your basement, to now running your business in a nice office building using a proper desk. Don't you think your ERP software deserves the same kind of upgrade?

Need more users to access your ERP system?

QuickBooks limits the number of users that you can give access to the system. Dynamics GP allows as many users as you want by allowing you to purchase additional users at any time.

## Integrate with other Microsoft products

Wish QuickBooks integrated better with your Microsoft Office products? Dynamics GP is built on the same platform and integrates seamlessly with Office products, whether it's scheduling events with Outlook, report building with Word Templates, exporting data to Excel, or updating contact info in Dynamics CRM.

## Having trouble accessing menus, or is QuickBooks running slowly?

QuickBooks is great for small businesses, but it starts to bog down after you've input a number of entries. So, if you're having trouble with runtime, accessing certain menus, or printing problems, it might be time to start looking for a higher level ERP system.

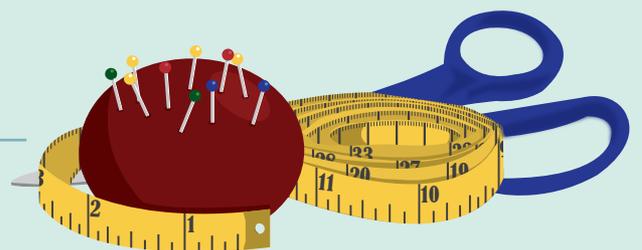

## Departmentalize

Different departments in your company have different roles, so it only makes sense to tailor your ERP system to their individual roles. You can grant access to certain reports based on a(n) team/employee's role in the company. Dynamics GP also allows you to restrict access to certain departments if it doesn't fall under its purview.

## Tailored to meet your needs

Feel like you need access to reports that display your data in a more meaningful way to you? Are there certain facets of your company that simply can't be accessed using Quickbooks? Dynamics GP is fully customizable for individual organizations, departments, or employees. Dynamics GP can be tailored to meet your needs, whether its custom reports, custom modules, cloud-based implementation, or much, much more.
